

RECOVERY DATA PLATFORM FACT SHEET

FACES &
VOICES
OF RECOVERY

TARGETS

Recovery Community Organizations
Treatment Environments
Triage Locations
Wellness/Recovery Community Centers
State Agencies

OVERVIEW

The Recovery Data Platform (RDP) is a cloud-based software solution developed in part by Faces and Voices of Recovery and Recovery Trek. With more than 400 unique data points, the platform aids Recovery Community Organizations, treatment environments, and other service providers with the tools and assessments needed to effectively implement peer recovery coaching programs. Through the use of robust reporting and scheduling tools, RDP provides any organization better outcome data and service management tools.

THE POWER OF DATA STORIES

Recovery changes things. Data tells a story. While many of us have observed the power of personal recovery stories first-hand, it is sometimes difficult to translate them into easily digestible results for organizations that may not be as familiar with recovery as we are. Many funding and partnership opportunities hinge on the ability of a group to demonstrate command of the analytics and metrics of recovery. RDP makes this process transparent and simple.

OBJECTIVES

Engage
Record
Report
Analyze

RDP unleashes the power of quantitative and qualitative data stories to identify the specific vital signs and hallmarks of recovery on a systemic, regional and national scale.

RECOVERY VITAL SIGNS

Recovery Vital Signs (RVS) are tools native to the Recovery Data Platform that allow any organization insight into the recovery of program participants. These vital signs include evidence-based assessment tools. These tools aid in constructing a qualitative recovery story for each program participant.
